

Expert Connect – Child Passenger Safety

As of 2019, road traffic injury remains the leading cause of death for children and young people aged 5–29 years and is the 12th leading cause of death when all ages are considered.

Global Status Report on Road Safety 2023, WHO

Prompted by the **urgent road safety crisis affecting children and young people**, the UNRSF secretariat serves as a convenor and connector of governments, the private sector, and civil society to **identify evidence-based, scalable, and life-saving measures** to better protect child passengers on the road.
